

# Eco-Friendly Adhesives and Services

## Bio based adhesives

Sourcing the latest polymers and resins, combined with our knowledge, research and product development, Beardow Adams has created a range of hot-melt adhesives with a high bio-based content for a multitude of industries.

## Alkali washable adhesives

Our alkali washable adhesives aid recycling processes by having a product that is easily removed from its applied surface using a caustic wash solution. The result is a cleaner product that is more readily reused or recycled, helping to align manufacturers and consumers with the growing introduction of deposit return schemes.

## Vegan safe adhesives

As part of our dedicated range of environmentally conscious adhesives, BAMFutura™ 43VE is a vegan approved packaging adhesive, it's the ideal metallocene adhesive to add value and efficiency to many packaging applications, including case and carton sealing.

## Pallet stabilisation adhesives

Our pallet stabilisation adhesives provide a temporary bonding agent between stacked layers of goods on a pallet - allowing for significantly less shrink wrap and interlayers - reducing material costs and plastic waste, whilst offering a stable and secure load.

## Environmental audits

An expert team of Beardow Adams service engineers are on hand to help businesses reduce waste and improve adhesive performance. Whether onsite or remotely, we help manufacturers troubleshoot common adhesive and applicator issues.
